Genetically Modified Organisms (GMOs) – Planned Sterilization of Humanity?

Par Peter Koenig
Mondialisation.ca, 01 mars 2016

Thème: Biotechnology and GMO, Global Economy

Severe health risks of Genetically Modified Organisms (GMO) are not new. Studies by scientists among others in France, Germany, Austria, since at least the 1990s, pointing to several levels of health dangers to mankind abound. A recent study released by Egyptian researchers found that rats fed a GMO diet suffer from infertility, among other health issues. In the US similar studies were muzzled by Monsanto and the Monsanto staffed FDA. In a 2011 paper the Institute for Responsible Technology – IRT refers to 19 animal studies linking GMOs to mostly liver and kidney organ disruption.

In the early 2000 the first Russian studies revealed reduction in fertility and birth defects in hamsters and rats. In a 2013 Russian study, scientist have discovered that mammals that eat GMO foodstuffs have difficulties to reproduce. The study concluded that "Campbell hamsters that have a fast reproduction rate were fed for two years with ordinary soya beans which are widely used in agriculture and those contain different percentages of GMOs. Another group of hamsters, the control group, was fed with pure soya [found in Serbia, as 95% of soya in the world is transgenic]."

According to Dr. Alexei Surov, who led the study on behalf of the National Association for Gene Security,

> "We selected several groups of hamsters, kept them in pairs in cells and gave them ordinary food as always. We did not add anything for one group, but the other was fed with soya that contained no GMO components, while the third group [was fed] with some content of GMOs and the fourth one with increased amounts of GMOs..... Originally everything went smoothly. However, we noticed quite a serious effect when we selected new pairs from their cubs and continued to feed them as before. These pairs' growth rate was slower, and [they] reached their sexual maturity slowly. When we got some of their cubs, we formed the new pairs of the third generation. We failed to get cubs from these pairs which were fed with GMO foodstuffs. It was proven that these pairs lost their ability to give birth to their cubs."

Sterilization from GMOs is not an accident. Henry Kissinger, the protégé of the Rockefeller Foundation and one of the driving forces – still today – of the Bilderberg Society, not only is the author of the infamous proclamation in the early seventies:

> 'Who controls the food supply controls the people; who controls the energy can control whole continents; and who controls money can control the world;'

he also said,

> ‘Depopulation should be the highest priority of foreign policy towards the Third World.’

This is still a (mostly unspoken) key objective of the elite, associated through different semi-secret organizations like the Bilderbergers, the Council on Foreign Relations (CFR), the Trilateral Commission, the British Chatham House, the Economic Forum (Davos), and others.

GMO Seeds

GMOs are based on two strands; one involves insect resistance, the other is herbicide resistant and more dangerous, because it is glyphosate-tolerant. Glyphosate, known under its trade name ‘Roundup’, is however absorbed in the food fibers and has devastating health effects. The herbicide is an endocrine-disruptor, a chemical that at certain doses can interfere with the hormone system of mammals. These disruptions may cause cancer, infertility, miscarriage, birth defects and full sterility by the third generation, as the Russian study clearly demonstrated.

In his eye-opening 2007 book Seeds of Destruction: The Hidden Agenda of Genetic Manipulation, F. William Engdahl points to food control and depopulation as the strategic key objectives of GMOs as put forward by Henry Kissinger already half a century ago. A less populated Third World will give the US and world elite easier and cheaper access to needed raw materials, allowing the ‘chosen few’ to maintain a lifestyle of exuberant luxury and resources abuse.

Ellen Brown, referring to Gary Null’s documentary Seeds of Death: Unveiling the Lies of GMOs, quotes Dr. Bruce Lipton,

> “We are leading the world into the sixth mass extinction of life on this planet. . . . Human behavior is undermining the web of life.”.

Worse is to come, if and when the Trans-Pacific Partnership (TPP) agreement is ratified by the US and its eleven Pacific partners. The TPP – much like the TTIP (Transatlantic Trade and Investment Partnership, linking the US with the 28 EU countries) – is negotiated behind closed doors. The chief agricultural negotiator for the US is the former Monsanto lobbyist, Islam Siddique. The two monster trade agreements would deprive governments from regulating transnational corporations’ activities, to the point where the rights of corporations would supersede sovereign nations laws. Corporations would be able to set up private courts that may rule a country liable for lost profit due to legislation that may interfere with their activities.

This would particularly apply to biotech agriculture. GMOs could no longer be forbidden by individual countries. They are integral parts of the two giant trade agreements which the US is attempting to ram down the throats of their ‘partners’ – and may do so in the general realm of vassalage which has been cultivated by Washington’s threat and sledgehammer politics – “You are either with us or you are against us” – and the latter is usually punished with devastating sanctions, if not with death of errant, non-compliant leaders.

The objective of depopulation is alive and well – and being implemented under our eyes; and We, The People, are blinded by the steady drop-by-drop of propaganda that makes us believe that these trade agreements will resolve the world's food problems, will eliminate famine. What they will eliminate after a few generations is peoples' fertility. This, coupled with the constant and continuous wars on terror and financial assassinations of entire countries (see Greece) by the so-called Bretton Woods Organizations, IMF and World Bank, working hand-in-hand with the FED and Wall Street, may eventually succeed in drastically reducing world population – if We, The People, do not wake up.

Waking up to a new form of agriculture is crucial. Back to nature and earth-friendly farming, as well as away from globalization to the notion of 'local production for local consumption'. Russia has a strict ban on GMOs. Russia is producing about 40% of its food by permaculture methods on simple garden plots. According to Natural Living, 80% of the country's fruit and berries, and 66% of vegetables and about 50% of the nation's milk are produced on dacha-type plots.

It is not too late to get away from GMOs, from planned sterility and from depopulating the globe for the benefit of a tyrant elite. But, We the People, have to wake up, take back the sovereign control of our nations from the vassal leadership which Washington has discretely, almost imperceptibly placed at the helm of the 11 TPP and the 28 TTIP nations by stolen or manipulated elections or outright 'regime change'. The breaking up of the Eurozone and the European Union – both of which are in dire straits – might be the beginning of a new era of self-determination.

Peter Koenig is an economist and geopolitical analyst. He is also a former World Bank staff and worked extensively around the world in the fields of environment and water resources. He writes regularly for Global Research, ICH, RT, Sputnik, PressTV, CounterPunch, TeleSur, The Vineyard of The Saker Blog, and other internet sites. He is the author of Implosion – An Economic Thriller about War, Environmental Destruction and Corporate Greed – fiction based on facts and on 30 years of World Bank experience around the globe. He is also a co-author of The World Order and Revolution! – Essays from the Resistance.
